

## PHPSecInfo

Security Auditing and Reporting for the PHP Environment

- » Approx. 15% of **all** NIST NVD entries from 2006 can be mitigated with secure configuration of PHP environment
- » **PHPSecInfo** provides an easy to use, easy to understand testing and reporting tool for PHP environment security

**Scan → Alert → Advise**

### Easy to understand

Modeled after the `phpinfo()` function, providing clear, easy to understand results in a familiar format.

### Compatible

Works with PHP4 and PHP5, used on over 19 million domains. No external requirements beyond a base PHP install.

### Easy to install and run

Just upload to web server and view in browser. Get detailed results immediately from a single function call.  
`<?php phpsecinfo(); ?>`

### Extensible

A clean framework makes it easy to write additional tests. Zend\_Environment\_Security module lets developers use PHPSecInfo in their own apps.
