P8 - Information Security Training and Awareness

This video module shows you why many information security training and awareness programs fail and attributes of successful information security awareness and training programs.

The Information Security Management Series is appropriate for managers and executives. Available on CD-ROM or WWW.

P9 - Operating System Security

This train-the-trainer print material is to be used in a face-to-face course. Included are student materials and instructor materials. The instructor's notebook includes presentation materials (PowerPoint slides and instructor's notes), lab activities (and solutions), facilitation tips, and course evaluation forms. The student workbook includes the presentation materials, notes pages, and the lab activities. This material is appropriate for IT trainers who are training IT professionals.

Price: TBA

(Coming in the Fall 2002)

P10 - Network Security

This train-the-trainer print material is to be used in a face-to-face course. Included are student materials and instructor materials. The instructor's notebook includes presentation materials (PowerPoint slides and instructor's notes), lab activities (and solutions), facilitation tips, and course evaluation forms. The student workbook includes the presentation materials, notes pages, and a copy of the lab activities.

Price: TBA

(Coming in the Spring 2003)

P11 - Intrusion Detection

This train-the-trainer print material is to be used in a face-to-face course. Included are student materials and instructor materials. The instructor's notebook includes presentation materials (PowerPoint slides and instructor's notes), lab activities (and solutions), facilitation tips, and course evaluation forms. The student workbook includes the presentation materials, notes pages, and a copy of the lab activities.

Price: TBA

(Coming in the Spring 2003)

P12 - Ethical, Social, and Professional Issues in Computing

These materials include a series of case studies in ethics, social issues, and professional practice as they relate to information security breaches. Included are instructor and student materials. The instructor materials include the case study and facilitation questions, a case overview, case objectives, and debriefing guidelines. The student materials include the case study and facilitation questions.

Price: TBA

(Coming in the Spring 2003)

Purdue University

Center for Education and Research in
Information Assurance and Security

Purdue University is an equal access/equal
opportunity university.

It's About More Than Computers

An unfortunate perception, prevalent in both the public and private sectors, is that information security is about protecting computers. Many factors affect information security, and not all of them have to do with computers and networks. In fact, the practice of information security transcends many aspects of an organization, and is actually *one of the most critical policy and structure decisions in developing and growing an organization.*

The Need for Security and Assurance Education and Awareness

A growing number of organizations are beginning to recognize the vital importance of *information* as the lifeblood of the organization. Regrettably, many of these same organizations fail to recognize the threats to this information in the digital world.

To ensure the security of your organization's information, you need to provide learning opportunities in fundamental security concepts and procedures—as well as in current and emerging security practices and the theory that serves as a foundation for them. Individuals from senior management, IT management and staff, to the end user need to be well versed in security and assurance.

P1 - Information Security Management Concepts

This CD-ROM provides an overview of the key concepts and goals of information security and how information security relates to an organization's information and technology assets. This interactive, self-paced instruction uses video, audio, text, case studies, practice exercises, and quizzes to promote and guide learning and understanding. This material is appropriate for end users, IT professionals, IT managers, and/or executives. Available on CD-ROM.

Price: \$125

P2 - Information Security Principles: An Overview

This video features authoritative experts in information security and assurance. The video and the accompanying viewing guide provide a concise summary of the current state of information security, starting with an overview of goals, concepts, and terms, and ending with procedures that will help you reduce risks to your organization. This material is appropriate for training sessions with end users, managers, and/or executives. Available in VHS or CD-ROM.

Price: \$125

P3 - Information Security Prevention, Detection, and Response

This CD-ROM looks at information security policies, personnel, and technology issues across the information security life cycle of prevention, detection, and response. This interactive, self-paced CD-ROM uses video, audio, text, case studies, practice exercises, and quizzes to promote and guide learning and understanding. This material is appropriate for IT professionals, IT managers, and/or executives. Available on CD-ROM.

Price: \$125

(Coming in the Fall 2002)

P4 - Information Security in the Workplace: What Every User Should Know

Every year organizations incur substantial losses due to unscheduled shutdowns of services. Why? Because employees do not follow the policies and procedures put in place to prevent problems. This instruction raises employee security awareness, focusing on the roles and responsibilities of the computer end user. Broken into five sections, this interactive, self-paced instruction achieves the goal of maximizing security awareness while reinforcing proven end-user methods. This material is appropriate for end users in any organization. Available in print or CD-ROM.

Price: \$125

(Coming in the Fall 2002)

The most significant problems with information security and assurance are not the technology issues, but the issues of awareness, cost, education, ethics, and use.

– Eugene H. Spafford, Director, CERIAS

Information Security Management Series

This series is intended for managers and administrators concerned with intellectual property, corporate assets, infrastructure, and information assurance. This series will provide you with a current look at the information assurance landscape including threats to your information assets, vulnerabilities in information systems, and countermeasures to strengthen information assurance and security in your organization. This series consists of four modules:

P5 - Foundations of Information Security

This video module will provide you with an overview of the foundational principles (confidentiality, availability, integrity, authenticity, access control, non-repudiation,

utility, and control) goals of a sound information assurance and security program. In order to understand the policies, procedures, guidelines, training, and technology that your organization needs to protect your information assets, you need to understand these fundamental principles. This module provides the background to the other modules in this series.

Price: \$125 per module

P6 - Information Security Risk Analysis

This video module shows you how to use cost-effective risk analysis techniques to identify and quantify the threats to your organization, the origin of the threats, necessary countermeasures to reducing or eliminating the threat, and associated costs.

Price: \$125 per module

P7 - Information Security Policy

This video/case study module shows you how to develop effective policy that mitigates your information security risks. After completing this module, your organization should be better prepared to establish information security policy that protects your information resources and guides employee behavior.

Price: \$125 per module
