

Oops !
I Didn't Mean to Do That!

Or

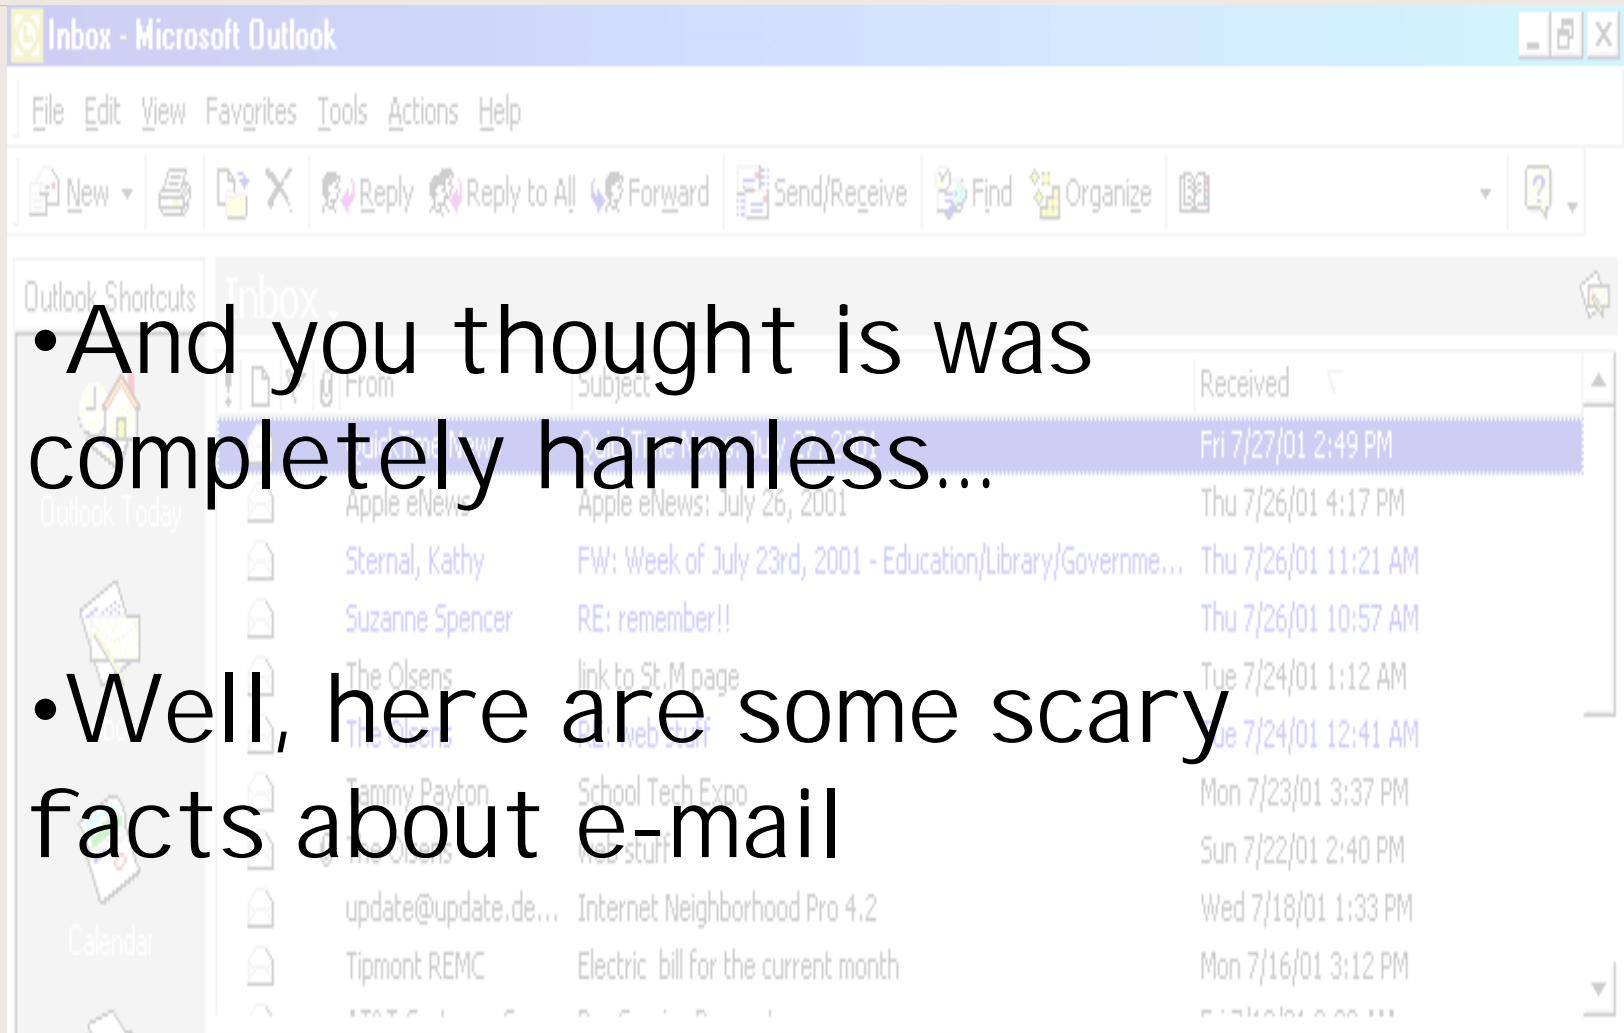

*‘What happens when good e-mail
goes bad.’*

Does this look familiar?

(or at least something similar)

YES, it is your e-mail screen.

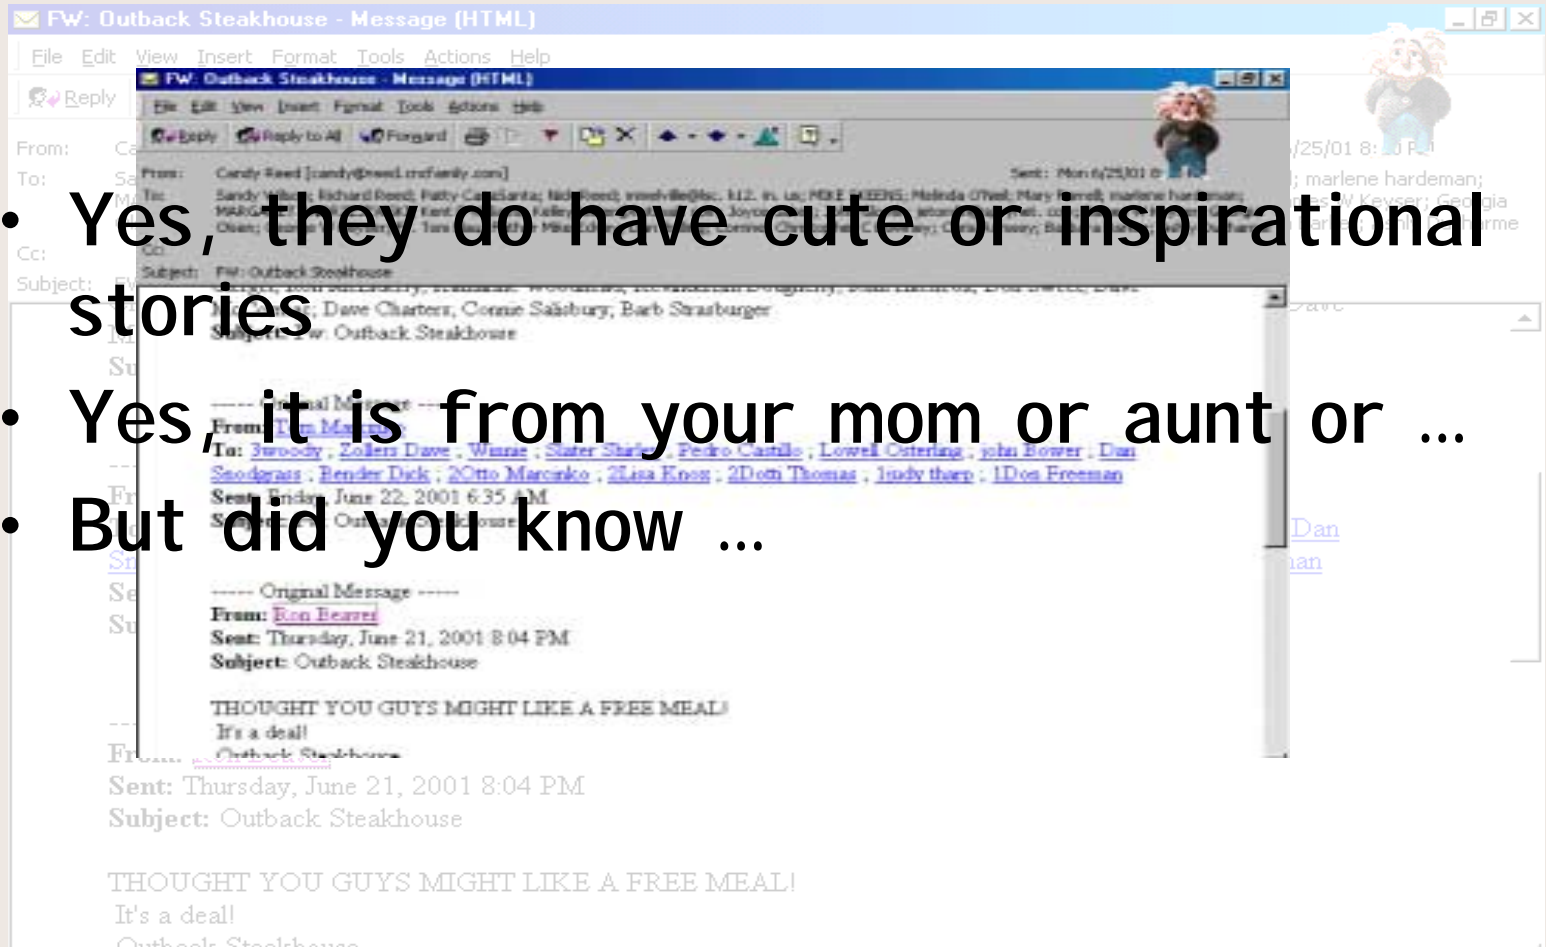

- And you thought it was completely harmless...
- Well, here are some scary facts about e-mail

Have you ever thought about just how un-private an e-mail really is?

- E-Mail is similar to a **postcard**.
- It **can** be read by any and everyone.
- Would you send **private** information on the back of a postcard?
- Of course **not**...
- But you do when you send **private** information in an e-mail.

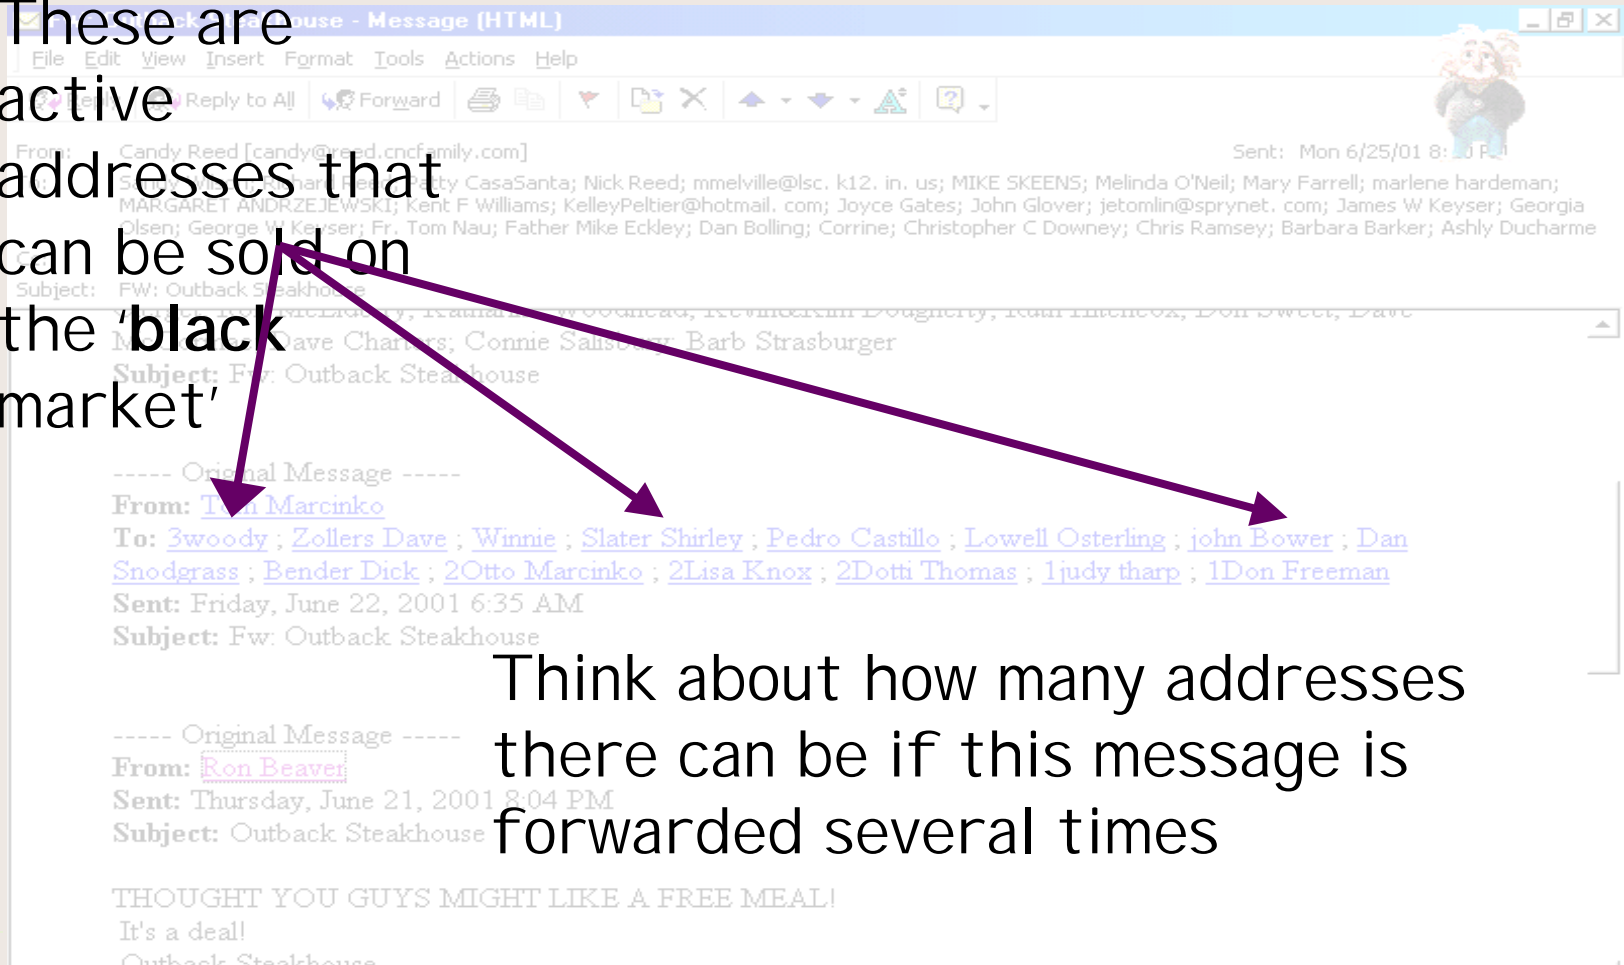

How about **ALL** those E-mails that are **forwarded** to you?

- Yes, they do have cute or inspirational stories
- Yes, it is from your mom or aunt or ...
- But did you know ...

What happens when you forward an E-mail?

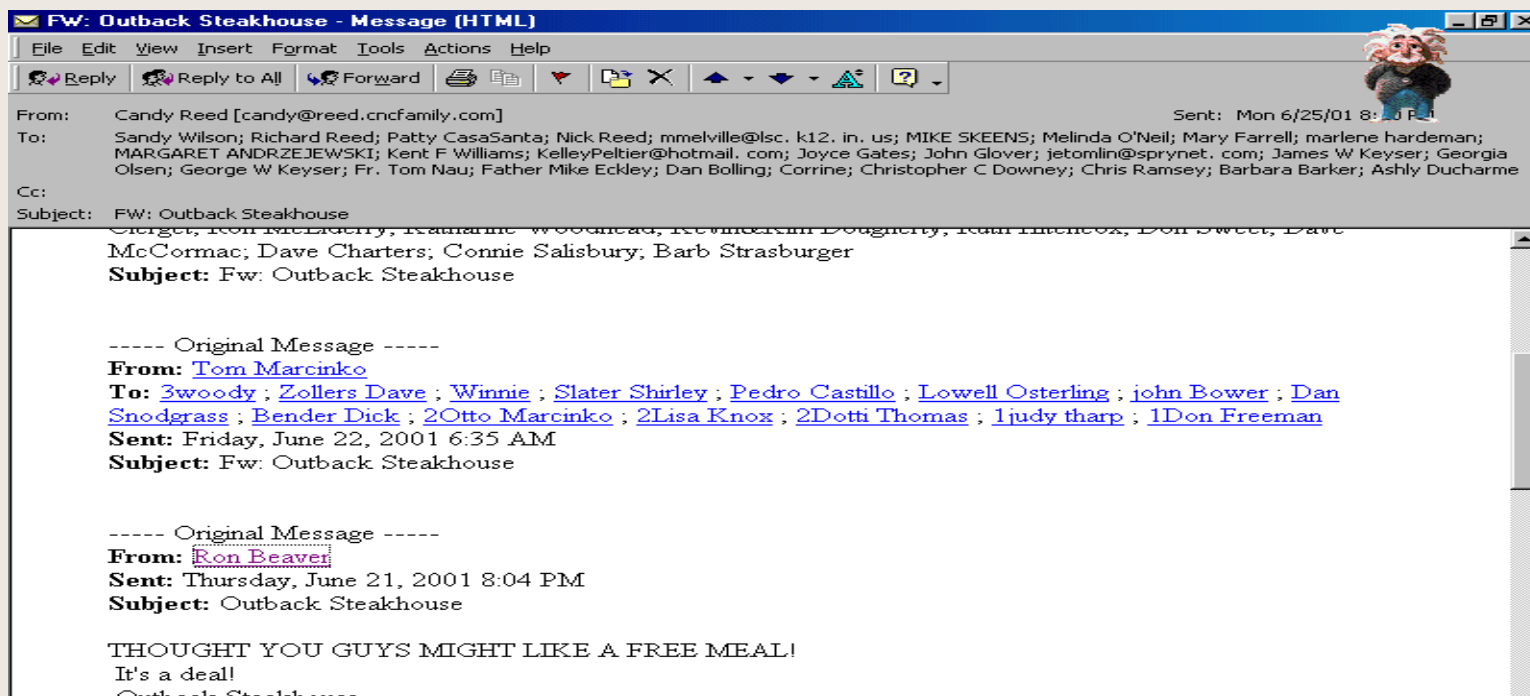

These are active addresses that can be sold on the 'black market'

Think about how many addresses there can be if this message is forwarded several times

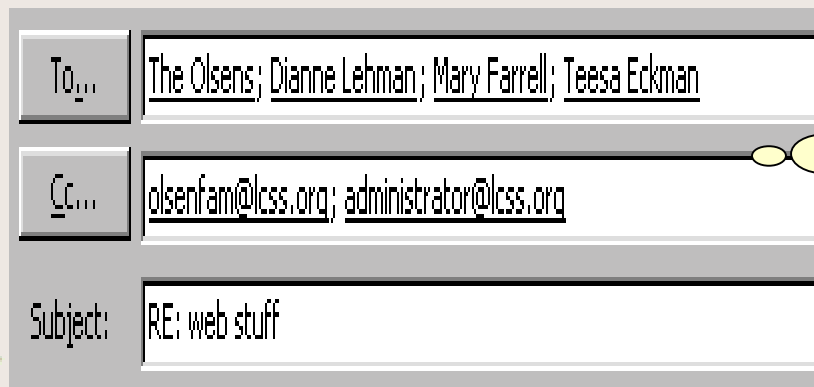

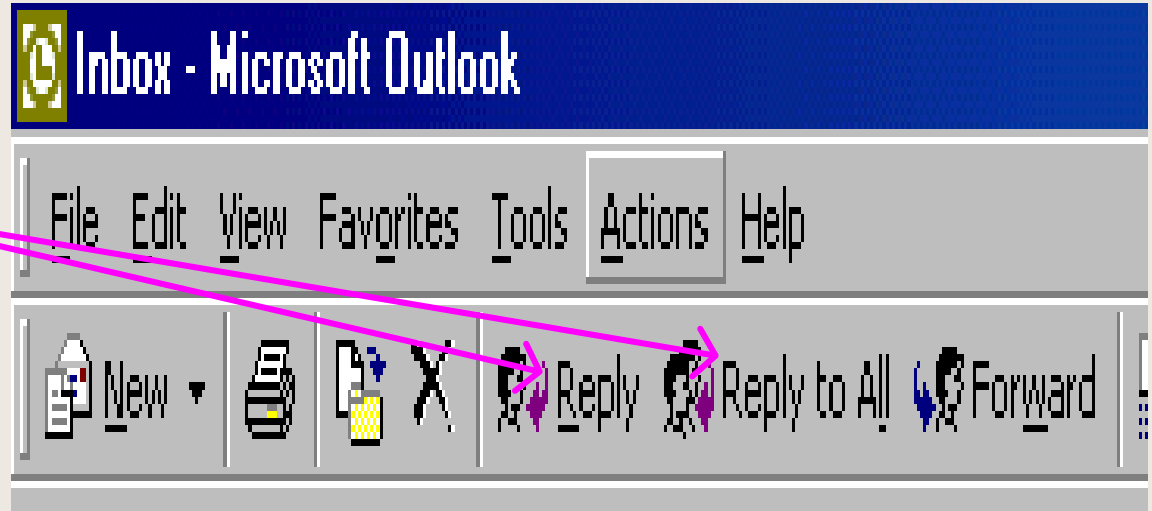

Someone could be selling **your** e-mail address?

Did you ever wonder where some of that 'junk' e-mail also known as **SPAM** comes from?

Who exactly DID I send that to ?

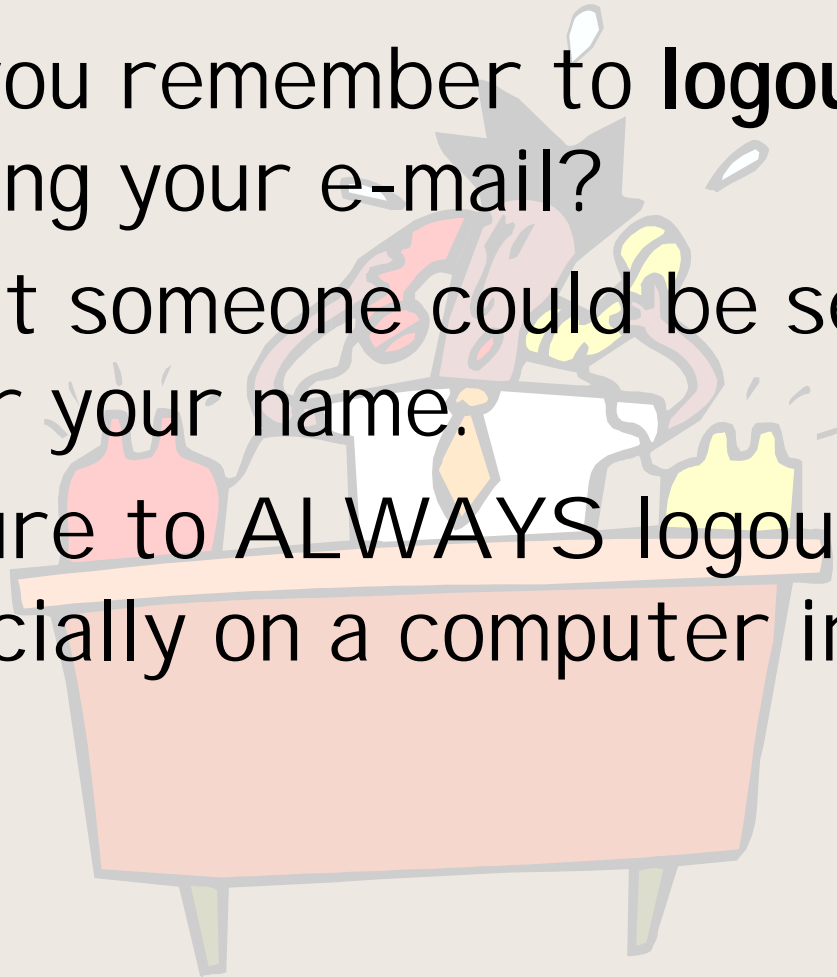

When you hit the
REPLY Button your
message can go out
to more than you
bargained for.

Did they ALL
need to see this ?

But I didn't send that!

- Did you remember to **logout** after reading your e-mail?
- If not someone could be sending mail under your name.
- Be sure to **ALWAYS** logout. Especially on a computer in a **common** area.

Here Is What Might Happen !

Case 1

'I'd rather suck raw eggs"

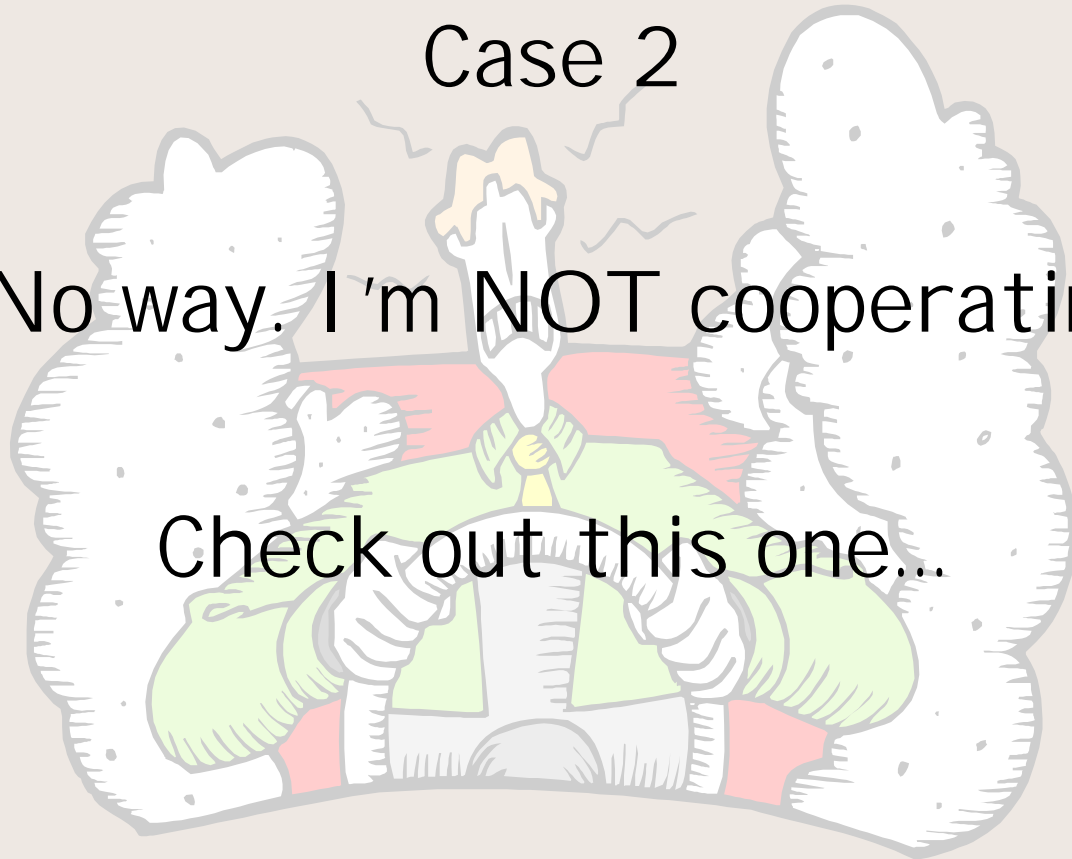

Check out what happen here...

Could This Happen to You ?

Case 2

“No way. I’m NOT cooperating!”

Check out this one...

CAUTION!

E-Mail **not** used correctly can
be hazardous to your
computer health.
